
Low-paid female workers hit most by job loss

COVID-19: 2019–2020

The gender divide

Employment loss during the COVID-19 crisis has been more balanced compared to the global financial crisis in terms of gender, but this loss has been felt most sharply by women working in low-paid service sectors.

Where are the jobs?

Employment growth is consistently weaker in mid-paid jobs, and strongest in well-paid jobs.

COVID-19 and teleworking

The majority of jobs cannot be teleworked.

During COVID-19, the share of people working exclusively from home tripled.

Jobs that can be teleworked tend to be good jobs, well-paid, requiring higher qualifications, with significant worker autonomy.

The gender divide

Employment loss during the COVID-19 crisis has been more balanced compared to the global financial crisis in terms of gender, but this loss has been felt most sharply by women working in the bottom quintile sectors.

Where are the jobs?

Employment growth is consistently weaker in mid-paid jobs, and strongest in well-paid jobs.
